

Matthew Zamora

Senior Full-Stack Engineer

Boise, Idaho | mzamora2899@gmail.com | github.com/MattZ-2051 | linkedin.com/in/matt-zamora-95b38316b | mattz-2051.github.io/portfolio

SUMMARY

Senior full-stack engineer with 5+ years building and shipping cloud-native web and AI/RAG applications using React/Next.js/Svelte, Node/NestJS, and AWS. Has led engineering teams of up to 4, including distributed, cross-timezone teams, while delivering measurable results — 95+ Lighthouse scores, 30%+ SEO gains, and a 50% increase in marketplace sales.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP

Frontend: React, Next.js, Svelte, SvelteKit, TanStack, Tailwind CSS, Shadcn/UI, Material UI, Storybook

Backend: Node.js, NestJS, Express, Flask, REST APIs, Microservices

Cloud & DevOps: AWS, GCP, Docker, Git, GitHub Actions, CI/CD, Strapi CMS

AI & RAG: OpenAI API, Perplexity API, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), Claude, Codex

Databases: PostgreSQL, MySQL, MongoDB, Supabase (incl. Vector DB)

Testing & Monitoring: Jest, Playwright, Vitest, Sentry, PostHog, Google Analytics 4 (GA4)

PROFESSIONAL EXPERIENCE

Fusion — Web Technologist & Software Specialist

May 2026 – Present

- Improved Lighthouse scores across delivered projects: Performance 55→95, SEO 70→100, Accessibility 65→100, through performance and accessibility optimization.
- Led design and development of enterprise web platforms on Strapi headless CMS with AWS hosting, delivering 3 client projects to date as the sole engineer.
- Architected SEO, analytics, and business intelligence solutions that improved search visibility and gave stakeholders clearer operational insight.
- Established CI/CD automation and AI-assisted development workflows, and partnered directly with clients to scope and deliver scalable solutions, helping grow the organization's web development offerings.

Hatch — AI Software Engineer (Contract, Part-Time)

Jul 2026 – Present

- Built a RAG-based conversational application using the OpenAI and Perplexity APIs, a Supabase vector database, and TanStack, delivering context-aware, scalable chat experiences.
- Implemented observability (error monitoring, analytics, production support workflows), improving system reliability and operational visibility.
- Architected and maintained CI/CD pipelines automating testing, deployment, and release, and established architecture standards and documentation to improve maintainability.

Viiision — Senior Software Engineer

Mar 2025 – Mar 2026

- Led a team of 2 engineers through modernization of a legacy PHP/React application to a NestJS backend and Svelte frontend, improving Lighthouse SEO scores by over 30% and reducing technical debt.
- Designed scalable backend services and optimized RESTful APIs, improving performance and reliability across high-traffic applications.
- Established engineering standards and AI-assisted development workflows to improve team productivity and maintainability.

AdPrompt AI — Full Stack Engineer (Contract, Full-Time)

Jun 2024 – Mar 2025

- Architected and deployed AWS infrastructure (EC2, Fargate, Amplify, Route 53, Docker) supporting frontend and backend services across dev, staging, and production environments.
- Designed and implemented CI/CD pipelines and cloud infrastructure automation, improving deployment reliability and operational efficiency.
- Led a distributed team of 4 engineers based in India through software quality initiatives, engineering standards, and code review, improving cross-timezone collaboration, development consistency, and maintainability.

Fandem — Full Stack Engineer (Contract, Full-Time)

Feb 2023 – Jun 2023

- Integrated Stripe and MetaMask/on-chain payment flows for a digital collectibles marketplace, supporting both fiat and cryptocurrency transactions and contributing to a 50% increase in marketplace sales volume.
- Diagnosed and resolved production issues across distributed systems through API tracing, log analysis, and performance optimization.
- Collaborated with cross-functional teams to design and maintain scalable marketplace services and backend applications.

Suku / InfiniteWorld — Full Stack Engineer

Mar 2021 – Dec 2022

- Built the storefront UI, payment integration, and backend services for a high-traffic distributed marketplace that sold \$2.5M in digital collectible assets.
- Developed reusable React/TypeScript component libraries with 100% automated test coverage.
- Contributed to application performance, maintainability, and software quality through rigorous testing practices.
